DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-16, drawn to an organic electroluminescent device, classified in class 313, subclass 504.
 - II. Claims 17-34, drawn to methods of manufacturing an organic electroluminescent device, classified in class 445, subclass 24.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)).
3. In the instant case the organic electroluminescent device can be made by forming a first substrate having a display region and a peripheral region, the display region including a plurality of pixel regions and a dummy pixel region; forming a first electrode by a sputtering process on a second substrate having the display region and the peripheral region; forming an organic electroluminescent layer by a printing process on the first electrode; forming a sidewall on the first electrode at a boundary of each of the plurality of pixel regions and the dummy pixel region; forming driving thin film transistors respectively adjacent to each of the plurality of pixel regions; forming first connection electrodes respectively connected to the driving thin film transistors; forming

second electrodes by a photolithography process on the organic electroluminescent layer so that a second electrode is formed in each of the plurality of pixel regions and the dummy pixel region, respectively; and attaching the first and second substrates with a sealant such that the first connection electrodes contact the second electrodes.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
